Summary

AI/ML Engineer and technical founder with hands-on experience building production AI SaaS platforms using Python, FastAPI, Docker, and OpenAI/Gemini APIs. Shipped 4 full-stack products end-to-end, integrating LLM-powered backends, RAG pipelines, and Agile delivery cycles. Adept at cloud-native architectures, microservices design, and scalable PostgreSQL/Redis data layers.

Education

Pimpri Chinchwad University

Bachelor of Technology, Computer Science Engineering. CGPA: 8.0 / 10

Pune, India

Expected May 2028

Experience

SahiCode

Founder & Chief Executive Officer

Remote

2026 – Present

- Architected an AI coding assistant with FastAPI, PostgreSQL, and Docker, delivering code generation, debugging, and multi-language optimization across 4 core product features.
- Engineered a microservices backend integrating OpenAI workflows, JWT auth, and Stripe billing; implemented Agile/Scrum ceremonies to coordinate solo sprints and accelerate releases.
- Led CI/CD pipeline setup, GitHub repository analysis, and system design, reducing deployment time by ~40% and establishing a scalable roadmap for cloud-native expansion.

Mindenious

Campus Ambassador

Remote

2026

- Spearheaded campus outreach for tech education programs, increasing student participation in coding workshops by 30% through targeted event coordination.
- Coordinated structured feedback loops between the organization and 200+ students, improving program relevance and community engagement at campus forums.

Projects

Project NETR — AI Opportunity Discovery Platform

2026

React • TypeScript • TanStack Start • Tailwind CSS • AI SDK • Gemini API

- Engineered a civic-tech platform with role-based recommendations across 5 user personas, reducing opportunity search time for government schemes, scholarships, and welfare benefits.
- Developed a conversational AI assistant using Gemini API for natural language queries over government data, paired with a secure document vault supporting 5+ document types.
- Designed a modular, internationalization-ready microservices architecture; integrated RAG pipeline for context-aware responses with sub-2s query latency.

FinBro — AI Finance Copilot

2026

Python • FastAPI • React.js • PostgreSQL • Redis • Docker • OpenAI API • Stripe

- Built a full-stack AI finance assistant with OpenAI-powered budgeting insights and expense tracking; containerized with Docker for consistent cloud-native deployment.
- Implemented JWT auth, Stripe subscription billing, and AI-driven financial statement analysis, achieving structured data extraction across 3+ document formats.

SahiCode — AI Coding Assistant

2026

Python • FastAPI • PostgreSQL • OpenAI API • Docker • Microservices

- Developed a production AI coding assistant supporting 5+ programming languages with context-aware, multi-turn code generation, debugging, and optimization.
- Integrated GitHub repository analysis and real-time code review; reduced average debugging cycle time by ~35% through automated issue detection workflows.

HumanWor — AI Text Naturalizer SaaS

2026

Python • FastAPI • React.js • NLP • Prompt Engineering

- Created a SaaS NLP platform converting AI-generated text to human-like prose via paraphrasing, tone adjustment, and sentence restructuring; achieved 90%+ readability scores.

- Designed prompt engineering pipelines with semantic fidelity controls, processing 1,000+ text transformations with consistent quality across diverse content types.

Technical Skills

Languages: Python, C++, JavaScript, TypeScript, SQL
Frameworks & Libraries: FastAPI, React.js, Node.js, Tailwind CSS, TanStack Start
AI / Machine Learning: LLMs, Prompt Engineering, RAG Systems, OpenAI API, Gemini AI, Scikit-Learn, AI SDK
Cloud & DevOps: Docker, Kubernetes, Microservices, CI/CD, Vercel, Git, GitHub, Linux, Postman
Databases: PostgreSQL, Redis
Methodologies: Agile, Scrum, REST API Design, System Design
Other Tools: Figma, Stripe API

Certifications

Google Cybersecurity Specialization	2024
<i>Google / Coursera — Network security, SIEM tools, incident response, Python-based security automation</i>	
Automate Cybersecurity Tasks with Python	2024
<i>Google / Coursera — Log parsing, anomaly detection, and security workflow automation</i>	
Version Control	2024
<i>Meta / Coursera — Git, branching strategies, pull requests, collaborative development</i>	
Computer Organisation and Architecture	2024
<i>NPTEL / IIT — Processor design, memory hierarchy, pipelining, cache architecture</i>
